AI Opponent Quiz Game

By Sanika Gorakhnath Kangane

Problem Statement ~

- Traditional quiz apps are single-player and static.

- Users want real-time competition with an AI opponent.

- Key issues :
  > No AI opponent simulation
  > No dynamic scoring or leaderboard
  > Lack of interactive engagement

- The goal is to make the quiz more engaging and interactive.

Solution ~

- Developed an AI Opponent Quiz Game using HTML, CSS, and JavaScript.

- Features implemented :

> Mode selection: Free (free mode), Premium & Tournament (locked modes)
> Timed quiz questions (15 seconds each)
> AI simulation: AI answers automatically at 5 seconds remaining
> Score updates: Player vs AI scoring
> Leaderboard: Dynamic ranking of top scores
> Forum: Users can post messages and interact

Program WorkFlow ~

- **Home Screen :**
  > Select mode (Free / Premium / Tournament)
  > Start quiz button

- **Quiz Section :**
  > Display question and options
  > 15-second timer
  > AI answers automatically at 5 seconds
  > Player selects answer → scores update
  > Popup shows result (Win/Lose)

- **Score & Leaderboard :**
  > Player and AI scores tracked per question
  > Leaderboard sorts scores in descending order

- **Forum :**
  > Users post messages
  > AI and user posts displayed with different styles

Conclusion ~

- Successfully implemented a responsive and interactive AI Quiz Game.

- Features include :
  > Timer-based AI opponent
  > Dynamic scoring and leaderboard
  > Forum interaction for community engagement

- Benefits :
  > Improves engagement and competition
  > Provides a foundation for future upgrades (adaptive AI, multiplayer, persistent leaderboard)
